

Selling OMEGA

The sales leader's guide: what we sell, what it costs, how a customer opts in to the parts they need, and the words that close it.

One platform for developing energy projects. A customer screens a site, designs it on live satellite, prices it, draws the permit set, models the money and, if they build product, runs the orders, the plant and the shipping. They start at **Omega Design** for **\$500** a month and opt in to the rest module by module, in their own workspace, paying only for what they switch on.

\$500

a month to start: Omega Design, the floor every package stands on

19 modules

on one menu, one list price each, added any time from inside the workspace

Minutes

from paying the first invoice to an open workspace: pay now, start today

WHAT IS IN THIS GUIDE

1. The pitch and the rules of the ladder
2. The menu: every module, its price, what it replaces
3. Plans, the money and the meters
4. Discovery: twelve tiles that pick the package
5. How a customer opts in, and the rep's four moves
6. Say it straight: objections and honest limits

WHERE TO POINT PEOPLE

The price list:

silmarillion.clearskyomega.com/offerings

Sign up and pay:

silmarillion.clearskyomega.com/start

Support: dev@clearsky-usa.com

Prices are the platform's price book **2026-10**, read at build time on September 28, 2026. The price list page is always current; when the two disagree, the page wins.

Say: "Everything you pay separate people and separate tools for today, from screening a site to getting it built, in one workspace. Start at \$500 a month. Add only the parts you actually use, when you use them. Nothing is per seat: one person designs, twenty can look."

What they do in the first week

- 1 **Screen a site.** Type an address. Omega Grid shows the substations, lines and hosting capacity around it; Omega Intel scores the parcel, terrain and network before anyone drives there.
- 2 **Design it.** Omega Design draws the site on live satellite: equipment, conduit, a guided build for BESS, solar, EV or a microgrid, and a blueprint and proposal for the customer the same day.
- 3 **Price it and prove it.** Omega Estimate turns the design into an electrical estimate, a bill of materials and a request for quote; Omega Storage sizes the battery and prints the pro forma.
- 4 **Keep going.** Plan sets for the utility and the AHJ, the permitting matrix, financing, then operations, and Omega Logic when they build and ship product of their own.

Why it saves on project development

Every module replaces something the customer buys today: a data subscription, a CAD seat, an estimating seat, a modelling tool, consultant or drafting hours. The menu on the next page names the typical figure beside each module so the rep can put the customer's own number next to ours.

The other saving is time. A site that used to take a week of handoffs between the screener, the designer and the estimator is one person's afternoon, and the proposal goes out while the customer is still interested.

Who buys

Installers (EV, solar, storage)	design, estimate, rebates, plan sets
Developers and owners	screening, grid, storage, capital
EPCs and engineers	plan sets, engineering, permits
OEMs and distributors	storefront, estimate, Omega Logic
Compute and data-centre teams	compute, grid, site intelligence

The rules of the ladder

1 · CORE Design \$500 Everyone: design, guided builds, blueprint, proposal.	2 · ADD-ON · PLUS Grid, Storage, Estimate, EV \$250 each Most installers, developers and EPCs.	3 · ADVANCED Plans, Intel, Engineer, Capital, Compute, Operate, Storefront \$500 each Teams that draw, engineer, finance or operate.	4 · BY THE PIECE Permits, Sites \$750 each + usage Volume permitting or site sourcing.	5 · OMEGA LOGIC Office, Plant, Purchasing, Logistics, Customer App from \$250; all five \$2,500 OEMs, distributors and builders who take orders, build and ship.
---	--	--	--	--

- **Start at the floor.** Every package includes Omega Design at \$500; no package is under it.
- **Nothing is free.** No free tier, no free viewer, no trial: they pay the first invoice and start today.
- **One list price per module, for everybody.** The price book is versioned; a signed package keeps the prices it was sold on.
- **Per workspace, not per seat.** 3 builder and 10 viewer logins included; extra builders \$50 a month, viewers \$15 a month.
- **Opt in any time, opt out at the review.** An addition is paid up front, prorated to their billing day, and is on the moment it is paid. A removal waits for the quarterly right-size.
- **Pay for the year, pay for 10 months of twelve.** 2 months free, invoiced once.

MODULE	WHAT IT DOES	REPLACES (TYPICAL, CONFIRM ON THE CALL)	A MONTH
CORE			\$500
D Omega Design	The floor every package stands on: draw a site on live satellite, place the equipment, run a guided build, and hand a customer a blueprint and a proposal.	A design seat and the proposal built by hand	\$500
ADD-ON			\$250 EACH
G Omega Grid	Where the grid has room: substations, lines and hosting capacity around a site, an interconnection pre-screen and ComEd capacity.	Grid and hosting-capacity data subscription, \$250–\$1,500/mo	\$250
PLUS			\$250 EACH
S Omega Storage	Size a battery to the load and the tariff, model the revenue stack and the ISO programs, and print the investor pro forma.	Storage modelling seat, \$300–\$1,000/mo	\$250
E Omega Estimate	Turn a design into an electrical estimate, a bill of materials and a request for quote to the vendors on it.	Estimating seat + manual RFQ time, \$250–\$800/mo	\$250
E Omega EV 20 EV applications/cycle	The EV cost workbook, the rebate application and the Level 2 project closeout, counted per application.	~\$1,000 per application prepared outside	\$250
ADVANCED			\$500 EACH
P Omega Plans	Plot plans, one-lines, schematics and permit sheets from the design, exported for CAD and the AHJ, with AI renders.	CAD seat + outsourced drafting, \$400–\$1,500/mo	\$500
I Omega Intel	Score a site before you drive there: parcel, terrain and network proximity, the screens a developer runs first.	Site-screening consultant or GIS analyst time, \$500–\$2,000/mo	\$500
E Omega Engineer	Conductor and transformer sizing, multi-node power flow and the site optimizer, with design validation.	Power-systems analysis licence or engineer hours, \$500–\$1,500/mo	\$500
C Omega Capital	Site investment analysis, DCFC and fleet models, financing applications and publishing to the marketplace.	Analyst model build + modelling tools, \$500–\$2,000/mo	\$500
C Omega Compute	Data center and compute campus design: cluster layout, power and load screening, land lease proposals.	Site-selection consultant time, \$500–\$1,500/mo	\$500
O Omega Operate	Run what you built: site lifecycle, the O&M console, SLA intelligence, field service, owner reporting and fleet command.	Asset-management platform, \$500–\$2,000/mo	\$500
S Omega Storefront	Your own branded storefront and customer experience on your site, powered by the platform, for resellers.	Custom web sizing tool + lead capture, \$500–\$2,000/mo	\$500

Omega Design is required by every other module. "Replaces" figures are typical market prices for the tool, data or hours the module stands in for; the Subscription Proposal lets the rep type the customer's own numbers over them. Never quote a figure the customer did not confirm.

MODULE	WHAT IT DOES	REPLACES (TYPICAL, CONFIRM ON THE CALL)	A MONTH
BY THE PIECE			\$750 EACH + USAGE
P Omega Permits 1 Permitting matrices/cycle	The permitting matrix and jurisdiction checklist for a site, counted per matrix; coverage is shown where it is verified.	A \$30,000 consultant report	\$750
S Omega Sites 25 Site studies/cycle	Find sites: parcel discovery and screening across a territory, counted per site study.	Parcel + capacity data, \$1,000–\$8,000/mo	\$750
OMEGA LOGIC · SOLD IN FIVE PARTS, LOGIC OFFICE FIRST			FROM \$250; ALL FIVE \$2,500
O Logic Office	Omega Logic's office: orders, customers, pricing, acceptance and fulfilment tracking, on the desktop and the phone app.	An order desk run in email and spreadsheets	\$1,500
P Logic Plant	The plant: the production board, work instructions at every bench, scans, tests and release.	Paper travellers and a whiteboard	\$750
P Logic Purchasing	Materials planning, purchasing and kit tracking, netted against what the plant is building.	A purchasing spreadsheet and stock counts by hand	\$500
L Logic Logistics	Freight coordination, delivery tracking, custody of every shipped unit and the warranty that binds to its site.	Carrier emails and a warranty binder	\$500
C Logic Customer App	The customer app: order status, documents, deliveries and sites, in your customers' hands under your brand.	Status calls and emailed PDFs	\$250

Metered modules

Three modules count what they produce. The allowance is included in the price; past it the customer buys a pack up front or is billed the overage on the next invoice.

METER	INCLUDED	OVER	PACK
Omega EV EV applications	20 a cycle	\$50 each	10 for \$500
Omega Permits Permitting matrices	1 a cycle	\$2,500 each	1 for \$2,500
Omega Sites Site studies	25 a cycle	\$15 each	25 for \$375

Logins

Every workspace includes **3 builders** (people who design and produce) and **10 viewers**. Extra builders are \$50 a month, extra viewers \$15 a month. Sell the workspace, not the seat.

Omega Logic

For a customer who takes orders, builds and ships product under their own name: the office, the plant, purchasing, logistics and an app their customers use under the customer's brand. It is ClearSky's product and the customer is a workspace in it, like a company in QuickBooks; they sign in to Omega Logic, then open their company, on the desktop or the phone app.

Five parts, each its own opt-in, Logic Office first: Logic Office \$1,500, Logic Plant \$750, Logic Purchasing \$500, Logic Logistics \$500, Logic Customer App \$250. All five together are **\$2,500** a month instead of \$3,500 one by one. Omega Logic is an add-on to any plan.

The customer app is the second sale inside the first.

Every unit the customer ships lands in their own customers' hands with order status, documents, deliveries, sites and the warranty bound to each site, wearing the customer's name.

The plans

PLAN	RULE	A MONTH
Omega Design	Omega Design alone; every module at list on top	\$500
Field	Omega Design + up to \$1,250 of modules, no By the piece modules; saves up to \$451 a month against the same modules one by one	\$1,299
Pro	Omega Design + up to \$3,000 of modules, at most 1 By the piece module; saves up to \$1,001 a month against the same modules one by one	\$2,499
Enterprise	Every module, several workspaces, pooled usage and development hours, on a contract	Contact for pricing

A plan is a discounted amount of the menu, so the menu and the plans always agree. The platform quotes whichever is cheaper for the modules chosen and says so on the price page. Below Field, the customer pays à la carte. Omega Logic, extra logins, the service fee and any credit come on top of any plan.

The service fee

An annual service fee covers onboarding in year one and support after: Omega Design **\$1,500/year**, Field and Pro **\$3,400/year** and Enterprise **\$10,000/year**. It is a separate line on the first invoice, never folded into a module price. A proposal may waive or set it, with a reason recorded.

The transformation credit

The proposal can offer **40% off for the first 90 days**, shown as its own line, never as a lower list price, and never below the \$500 floor. Monthly billing only; annual prepay already carries its 2 free months.

How they pay

The first invoice is paid by card on the invoice's own page (Stripe or QuickBooks, whichever the signup page names); the workspace opens when it is paid, within minutes. Every addition is the same: quote, pay, on. A card on file is charged for opt-ins and renewals.

Pay for the year, pay for 10 months of twelve: one invoice, 2 months free. Monthly is billed on the day of the month they signed up; an addition is prorated to that day.

Worked examples

CUSTOMER	STARTING PACKAGE (OMEGA DESIGN FIRST)	LIST	PAYS	FIT
EV installer	EV, Estimate, Grid, Plans	\$1,750	\$1,299	Field · \$0 of module room left
Solar / BESS installer	Storage, Estimate, Plans	\$1,500	\$1,299	Field · \$250 of module room left
Developer	Grid, Storage, Capital	\$1,500	\$1,299	Field · \$250 of module room left
EPC / engineering	Plans, Engineer, Estimate, Permits	\$2,500	\$2,499	Pro · \$1,000 of module room left
OEM	Storefront, Storage, Estimate	\$1,500	\$1,299	Field · \$250 of module room left
Distributor	Storefront, Estimate	\$1,250	\$1,250	Lite + modules
Compute / advisor	Compute, Grid, Intel	\$1,750	\$1,299	Field · \$0 of module room left
Capital partner	Capital, Grid	\$1,250	\$1,250	Lite + modules

Each line is the platform's own quote for that starter package on price book 2026-10: the list total of the modules one by one, and what the customer pays when a plan is cheaper. The price page shows the same starters. A starter is a place to begin the conversation, not a quote.

The signup page asks *What does your team do?* as one screen of tiles; the Subscription Proposal asks the same twelve. A tile tapped means **this quarter**, and that module goes in the starting package; **within the year** puts it on the next-rung list. The answer is always at least Omega Design.

#	TILE	THE QUESTION	THIS QUARTER ADDS
1	Design sites BESS, solar, EV, microgrid, data centre	Do you design sites (BESS, solar, EV, microgrid, data centre)?	Omega Design
2	Find sites & grid capacity Screen parcels and hosting capacity	Do you find or screen your own sites or grid capacity?	Omega Grid Many sites at a time: Omega Intel; Northern Illinois C&I property: Omega Sites
3	Size storage & model savings Savings or revenue for a customer	Do you size storage or model savings or revenue for a customer?	Omega Storage
4	Price jobs & buy equipment Estimates, BOMs and purchasing	Do you price jobs, build a BOM or buy the equipment?	Omega Estimate
5	EV make-ready & rebates File rebate applications	Do you file EV make-ready or rebate applications? (applications a month)	Omega EV
6	Utility & AHJ drawings Submit plan sets yourselves	Do you submit drawings to a utility or an AHJ yourselves?	Omega Plans
7	Permitting Timelines, fees and a Gantt	Do you need permitting timelines, fees and a Gantt? (where)	Omega Permits
8	Electrical engineering In-house or bought in	Do you do electrical engineering in-house or pay for it?	Omega Engineer
9	Raise capital Investors, lenders, financing	Do you raise capital, sell to investors or need financing?	Omega Capital
10	Compute & data centres Build compute sites	Do you build compute or data-centre sites?	Omega Compute
11	Operate assets Run what you built after COD	Do you operate assets after COD?	Omega Operate
12	Sell your own product Take orders, build and ship	Do you sell a product under your own name, take orders, build or ship?	Omega Storefront Take orders and run an office: Logic Office; Build units in a plant: Logic Plant; Buy parts and kit them: Logic Purchasing; Ship, deliver and warrant: Logic Logistics; Customers track their orders: Logic Customer App

Then one money question

"What do you pay today for each of these: tools, data, consultants, drafting?" Those numbers go on the proposal's value page beside the module prices. Ask it; do not guess it.

How to run it

- Open the price list page and tap the tiles with them; the dock shows the recommended package, priced, as you go.
- Ask for volumes where a module is metered: EV applications a month, matrices, site studies.
- Name the next rung out loud: "when you start submitting your own drawings, Omega Plans is one click from inside the workspace."

Signing up: a guided run

- 1 **Account.** Work email only (a public address is refused); Google or a password. Create account lands straight in the run.
- 2 **What does your team do?** The twelve tiles, or Skip. The dock prices the recommendation as they tap.
- 3 **Your system.** The one menu, priced live: monthly, or yearly at 10 months of twelve, with the first-year service fee named.
- 4 **Confirm email** (only while unconfirmed), then **Billing & pay:** the short billing form, then the invoice's card page.
- 5 **In.** Paid means open, within minutes, on the package they chose.

A link from the price list carries the package (`?modules=` or `?plan=`) and skips the question screen; so does a proposal link. The draft is kept in their browser, so the email link reopening the page resumes where they were.

Inside the workspace: the Modules page

Every module is listed for every workspace, each card with one status and at most one action:

- **Live**, or **Live, always included** (Omega Design).
- **Not on your plan** with **Opt in:** the menu states the money first, then **Opt in and pay** (or **Turn it on** for a \$0 addition inside a plan's cap). Paid, the plan re-reads itself and the tools open without a reload.
- **Waiting for payment** with **Pay**, **I've paid** and **Cancel request**.
- **Opt out** queues the removal for the quarterly review and states the fee before and after; **Cancel request** withdraws it.

Bought is visible. Inside Site Map, a ribbon tab the plan stops at is never blank: it reads **Opt in** with the module and the price, and a locked tool tile names the module that carries it. A member who cannot buy is told who to ask. Showing it is never access: the commands stay shut until it is paid.

Legacy workspaces (billed by ClearSky outside the engine) opt in the same way: by card as an add-on beside their plan where the module switches on exactly, else as a recorded request ClearSky activates.

The rep's four moves

- 1 **Demo from the price list.** Screen an address, draw it, price it, in front of them. Twenty minutes. Then tap the tiles together.
- 2 **Send the Subscription Proposal.** From the discovery, branded for their company, the value page with their numbers, the order form. Accepting it prices nothing; signup does.
- 3 **Follow the first month.** Signed up but never signed in, signed in but nothing built, payment overdue: the growth board flags each, with the next action. Nothing built in the first two weeks is the call.
- 4 **Flip them up.** When they hit a tab that says Opt in, that is the next sale, and they can make it themselves. Watch what they build; propose the module that finishes it.

Objections

"That's a lot per month." Compared with what? Put their spend on tools, data and hours next to the modules they picked; the proposal does it line by line. Start smaller: Omega Design alone is \$500, and every module is one click later.

"We already have CAD / a modelling tool / a GIS person." Keep them. Buy the modules that replace what you do not have, and skip the ones that duplicate what you do. Nothing forces a bundle.

"How many licences do we need?" None. A workspace comes with 3 builders and 10 viewers, and the whole company works in it.

"Can we try it first?" The demo is the try: screen, draw and price one of their own sites with them on the call. Then start on Omega Design alone at \$500 a month; there is no trial, and there is nothing to lose by starting small, because every module is one click later and comes off at the quarterly review.

"What if we stop needing a module?" Opt out from the Modules page; it comes off at the quarterly review and the price of what stays is stated before you confirm.

"Is our data safe?" Every workspace is its own tenant; access is enforced on the server, not hidden in the page. Pricing, sizing and scoring run on our servers, never in the browser.

"Can it wear our brand?" Omega Storefront: your name on the platform, sizing on your own website, leads and orders into your queue. It needs the reseller addendum.

Limits to name up front

Omega Storefront	Reseller addendum required.
Omega Permits	Verified Vista / SDG&E pack; other jurisdictions are draft matrices with unverified agencies, fees and durations.
Omega Sites	Northern Illinois (ComEd) only.
Interconnection Study	Enterprise contract only; not granted by Engineering.

Marked BETA (sell only with the beta clause)

Omega Storage	Bill Analysis
Omega Plans	3D Site Visualizer, Georeferenced Export, Export for CAD
Omega Intel	Noise Modeling
Omega Engineer	Design Optimizer, Export for Validation
Omega Permits	Permitting Matrix

Not sold, or not yet

Not sold: OSA Portal (JV agreement); EV / Project Estimate (tenant extension); Intake Queue (staff queue); AHJ Approval Portal, Aggregators, AI Data Offtakers, Procurement Marketplace (not shipped); Permit Creator (hidden, retiring or unwired; not included in any package). Enterprise is **contact for pricing**: every module, several workspaces, pooled usage and development hours on a contract; the price list publishes no figure. Never sell a hidden or "soon" feature as included.

Two things a rep never does. Never quote a price the price page does not show; the book is versioned and the server prices every quote. Never promise access by a link: what is paid for opens, and nothing else does.
