

The OMEGA Value Ladder

Meet customers where they are, and lead them on the journey.

The unit price never changes. What each customer consumes does.

SEPTEMBER 2026

PRICING AND PACKAGING PLAN • FOR DISCUSSION

PROPRIETARY AND CONFIDENTIAL

We sell one price for 186 tools. Buyers can't see what they're paying for.

One lump, no map

Field is \$1,299 and Pro \$2,499 for a platform with 186 editor functions plus 40 tools. A buyer can't tell which parts they need.

Months to understand

It takes a customer three to six months to see what the platform does for them. That is a sales problem, not a product problem.

The \$10–20M company

Most of our market is small companies that need a door in at a price that fits their revenue budget, then a reason to add more.

One designer, twenty viewers

One person builds, the team looks. Per-seat pricing undercharges the value and punishes the spread we want.

\$45,000

Concord Energy filed 45 National Grid EV applications in 72 hours on OMEGA. Prepared outside the platform that is about \$1,000 each. They pay \$1,299 a month. The value is there. The packaging has to show it.

Six pricing rules, built into the software, not left to the sales call

\$500 is the floor

Lite is the smallest thing we sell. No package, trial or credited month goes below it.

Nothing is free

No free tier, no free function, no free viewer. A trial is a package with a start date and a price.

One price per module, for everyone

Customers compare notes. A fixed unit price means nobody finds out they paid more for the same thing.

Priced per workspace

Plans include a counted number of builder and viewer logins. Extras are priced. We charge for the work, not the login.

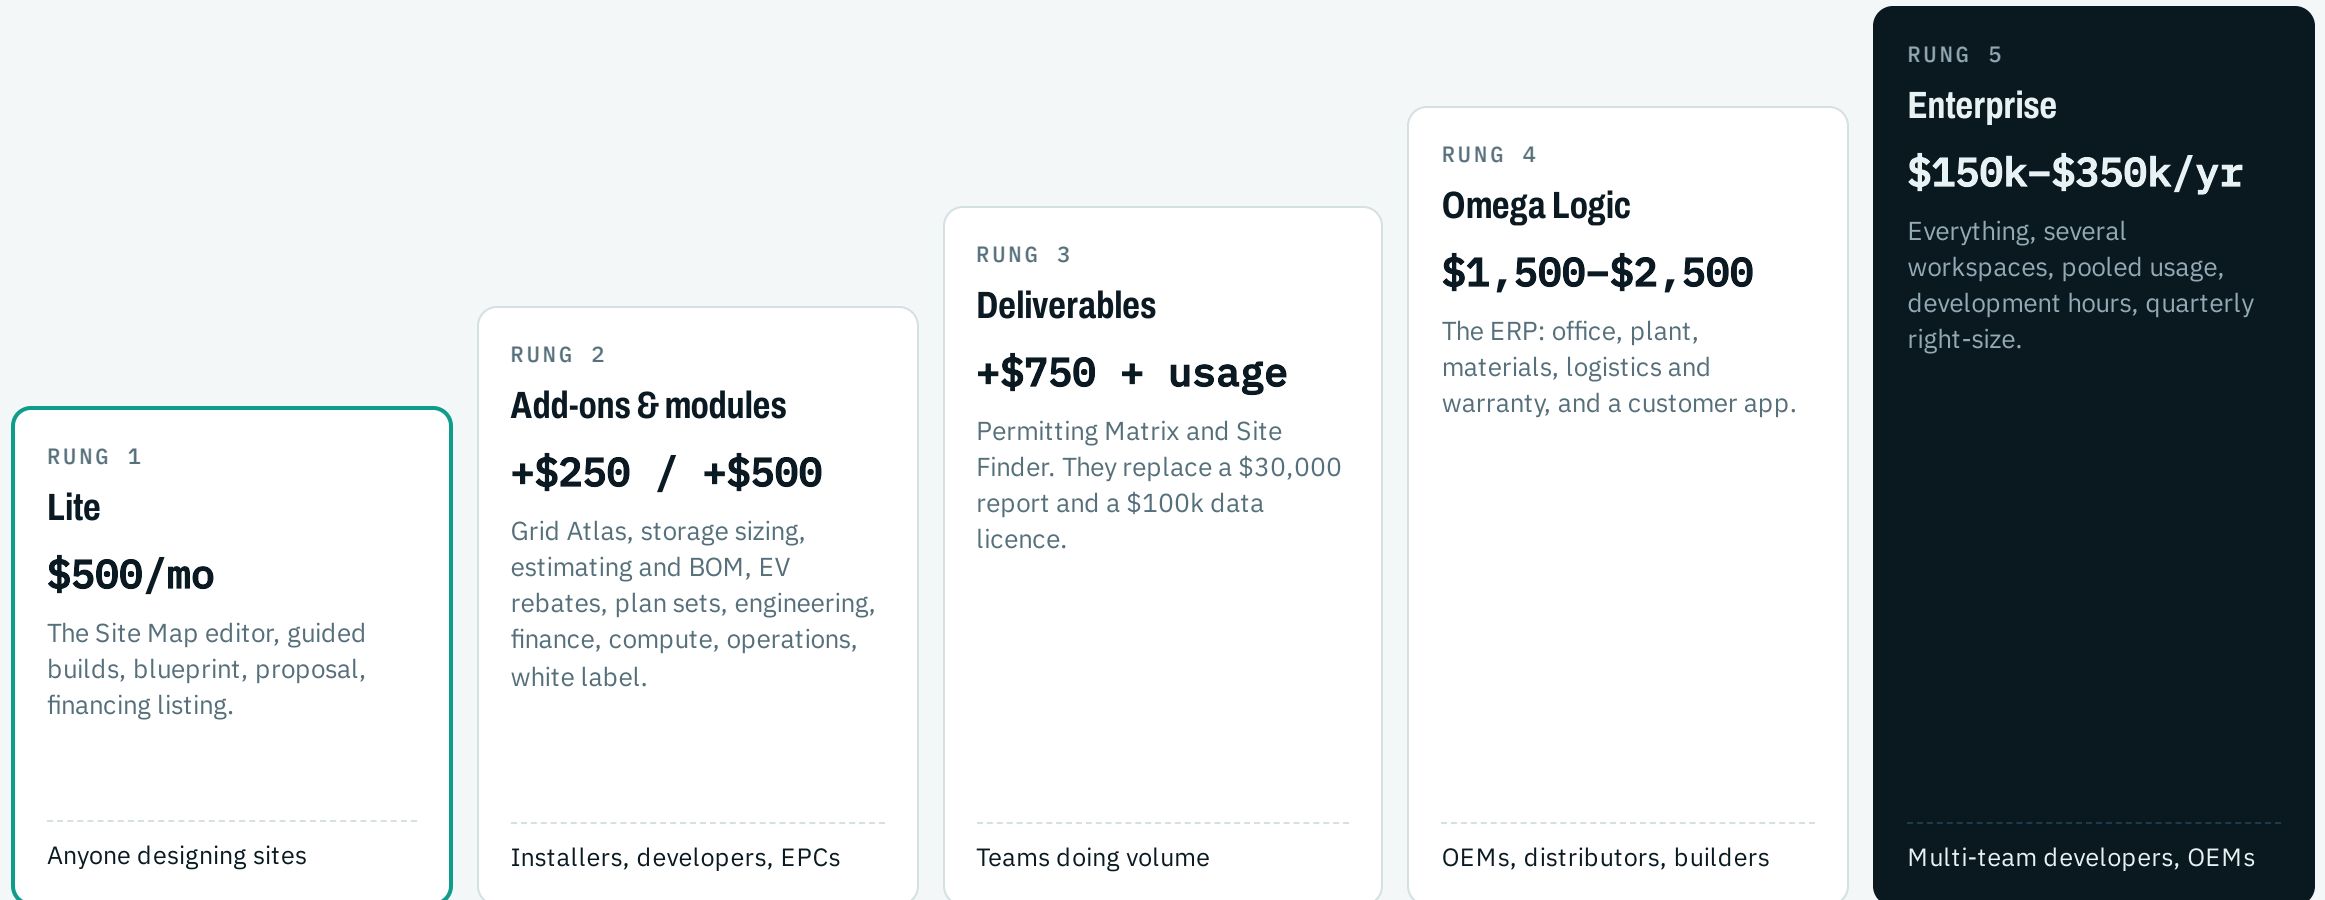

Start at list, give a credit

It is easier to discount than to raise. New accounts see list price and a transformation credit for their first 90 days.

Add any time, right-size quarterly

Customers opt in whenever they like. At each 90-day review, usage decides what stays and which plan fits.

Five rungs, from designing a first site to running the whole company

186 functions across 12 ribbon tabs, sorted into the modules we sell

~90

Lite

Satellite site setup, scale, drawing, all equipment, guided BESS / L2 / DCFC / solar builds, conduit and trench, 3D review, blueprint, proposal.

\$500 • THE FLOOR

5

Grid Atlas

Substations, lines, plants, hosting capacity, grid pre-qualify, interconnection screener.

\$250 ADD-ON

11

Storage Sizing & Revenue

BESS sizers, bill import, value stack, price decks, non-export headroom, pro forma.

\$250

8

Estimate, BOM & Procurement

Construction cost, NECA electrical estimate, takeoff to budget, BOM sourcing, RFQ, exports.

\$250

17

Plan Sets & CAD

Plot plan, one-line, schematic editor, riser, permit sheet, sheet set manager, full CAD, building designer.

\$500

14

Site Intelligence

Network proximity, parcel screening register, site pre-screen and score, GIS layers, LiDAR terrain.

\$500

14

Engineering & Analysis

Circuit analysis, NEC load calcs, string sizing, load flow, PVWatts yield, optimizer, PE validation.

\$500

11

Compute & Data Center

Compute build, container data centre, max load, load siting, gas and fiber tie-in, land lease.

\$500

Plus modules outside the editor: EV Rebates & Closeout, Investor & Finance, Operations, White Label, Permitting Matrix, Site Finder, and Omega Logic.

Every price, on one page

FLOOR \$500	Lite Site Map editor, guided builds, blueprint, proposal, financing listing, 3 builders + 10 viewers				
ADD-ON \$250	Grid Atlas grid and interconnection intel				
STANDARD \$250	Storage Sizing & Revenue	Estimate, BOM & Procurement	EV Rebates & Closeout workbook + utility closeout, usage over 20/mo		
PREMIUM \$500	Plan Sets & CAD	Site Intelligence	Engineering & Analysis	Investor & Finance	Compute & Data Center
	White Label				Operations
DELIVERABLE \$750+	Permitting Matrix 1 matrix/mo included	Site Finder 25 site studies/mo included			
OMEGA LOGIC \$2,500	Office \$1,500	Plant \$750	Materials & Purchasing \$500	Logistics & Warranty \$500	Customer App \$250

The plans we already sell become a discounted amount of the menu

No customer has to relearn a price, and the plans never contradict the menu. Field and Pro are value caps: pick any modules up to the cap and pay the plan price.

PLAN	PRICE	WHAT YOU GET	MENU VALUE	IN THE AGREEMENT TODAY
Lite	\$500/mo	Lite only; add modules one by one at list	\$500	New line on the order form
Field	\$1,299/mo	Lite + any modules worth up to \$1,250	up to \$1,750	Tier 1 Field, \$1,299
Pro	\$2,499/mo	Lite + any modules worth up to \$3,000, one Deliverable	up to \$3,500	Tier 2 Pro, \$2,499
Enterprise	\$150k–\$350k/yr	Every module, several workspaces, pooled usage, 7 dev hours/mo	\$108k/yr at list	Tier 3, \$25k setup, \$10k/yr service
Platform	Custom	Omega Logic plus anything above, scoped per contract	n/a	Tier 4

Annual prepay stays as it is (pay 11 months for 12). Enterprise's floor sits above the whole menu at list, so its case rests on workspaces, dev hours and support. That is one of the decisions on the last page.

Three numbers that make the price obvious

EV rebate applications

\$45,000

45 applications prepared outside

\$1,299

Concord's month on OMEGA

EV Rebates & Closeout takes a job from estimate to utility form to the closeout package that gets the rebate paid.

Permitting matrix

\$30,000

one consultant report

\$9,000

a year, one matrix a month

Five sheets: permits, Gantt, dependencies and risk, fees. **BETA** one jurisdiction verified so far.

Site Finder data

\$100,000

a year to license the data

\$750

a month to the customer

C&I sites ranked by deliverable kW. About 12 subscribers covers our cost. Northern Illinois today.

A short discovery picks the starting package. Anything they'll need later is the next rung.

01	Do you design sites?	Lite	07	Do you need permitting timelines and fees?	Permitting Matrix
02	Do you find your own sites or grid capacity?	Grid Atlas, Site Intelligence	08	Do you do electrical engineering?	Engineering & Analysis
03	Do you size storage or model savings?	Storage Sizing & Revenue	09	Do you raise capital or need financing?	Investor & Finance
04	Do you price jobs or buy equipment?	Estimate, BOM & Procurement	10	Do you build compute sites?	Compute & Data Center
05	Do you file EV rebate applications?	EV Rebates & Closeout	11	Do you operate assets after COD?	Operations
06	Do you submit drawings to a utility or AHJ?	Plan Sets & CAD	12	Do you sell, build or ship product?	White Label, Omega Logic

THE RULE

"This quarter" puts a module in the starting package. "Within the year" puts it on their next rung. Then one money question: what do you pay today for each of these? Their answer is our value page.

Fifteen accounts, each with a starting package and a next rung

ACCOUNT	TYPE	STARTING PACKAGE	PAYS / MO	NEXT RUNG
Clean Cell	OEM	Field (White Label, Grid Atlas, Storage, Estimate/BOM) + Omega Logic	\$3,799	Plan Sets, Permitting
CIR	EPC	Pro (Plan Sets, Engineering, Estimate/BOM, Permitting, Grid Atlas, Site Intel)	\$2,499	Operations
Concord Energy	EV installer	Field (EV Rebates, Estimate/BOM, Grid Atlas, Plan Sets)	\$1,299	EV usage over 20/mo
Budderfly	Developer	Field (Grid Atlas, Storage, Investor & Finance)	\$1,299	Operations
East West Energy	Compute	Field (Compute, Grid Atlas, Site Intelligence)	\$1,299	Engineering
FENECON	OEM	Field by MSA amendment (White Label, Storage, Estimate/BOM)	\$1,299	Omega Logic
Walters · Solela · Helios · OGI	Mixed	Lite + two or three modules each	\$1,250 each	Logic, Operations, Site Intel, Plan Sets
Green Wolf · Lattice · Roam · R.E.S.	New	Discovery call, Lite at minimum	≥ \$500 each	Set on the call
NextNRG	Developer	Existing enterprise contract, mapped to modules at renewal	contract	Operations, Site Finder
Pipeline at proposed prices (excluding NextNRG; discovery accounts at the floor)			\$18,494	≈ \$222k / yr

Click the menu. That is the price, the invoice and the access.

1 · ADMIN

Tick the menu

In the tenant's record, staff tick modules. The customer type preselects a starter pack. The \$500 floor is enforced.

2 · PRICE

Priced live

List, the plan that fits, the credit and the first 90 days, from one versioned price book.

3 · PROPOSAL

Proposal + order form

A branded PDF in the customer's name, built like our BESS Pro Forma, with the agreement's order form filled in.

4 · PAY

Stripe subscription

One line per module, usage metered, card on file. Stripe is already wired to our billing.

5 · ACCESS

Switched on

What Stripe says is paid is what the software unlocks. Every change is logged.

The customer opts in from the same menu

- Their owner or admin sees "Your plan": what they have, what each module adds, the price.
- Tick a module, see the prorated charge, confirm. It switches on when paid.
- Locked buttons in the editor say which module unlocks them and what it costs.

Every 90 days

- Usage against what's included, per module.
- Under-used modules can come off; heavy use moves them to the plan that fits.
- Unit prices never change inside the first 12 months.

Most of the plumbing exists. Six steps finish it.

Already built

- Tenant billing with plan, add-ons and a tool allowlist, every change logged
- Stripe customers, subscriptions, payment links, billing portal and webhook
- Add-on switches in the admin console, including Omega Logic
- The BESS Pro Forma pattern the proposal tool will copy
- Usage caps already counted per tenant for the site study

To build, in order

- 1. One module catalog and a versioned price book, a Stripe price per module
- 2. Re-lock the editor by module, and close the eight places today's locks leak (the File menu, command search, a URL switch)
- 3. The Package panel in admin, and payment switching modules on
- 4. "Your plan" for customers to opt in
- 5. The subscription proposal tool
- 6. Usage metering and the 90-day right-size report

What we will say plainly to customers: the Permitting Matrix is in beta with one verified jurisdiction; Site Finder covers northern Illinois; three export hand-offs are marked beta. The subscription agreement needs a module schedule, viewer logins, electronic opt-in and a reseller addendum.

Six decisions we'd value your view on

1 · The unit prices

\$500 Lite, \$250 Grid Atlas and Standard, \$500 Premium, \$750 Deliverable, Omega Logic \$1,500–\$2,500.

2 · The transformation credit

40% for the first 90 days, never below \$500. Right size, and should it need a sign-by date?

3 · Enterprise

The full menu lists at \$108k a year. Keep the \$150k floor on workspaces and dev hours, or move it?

4 · Usage pricing

EV applications over 20 a month, permitting matrices over one, site studies over 25.

5 · Beta modules

Sell the Permitting Matrix by verified jurisdiction, as a draft, or hold it until more jurisdictions are verified?

6 · Instant opt-in

Customers add modules themselves and pay on the spot, or we approve each addition?
