

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

The Omega Logic app

ClearSky's operations app, with your company as the workspace inside it: what needs a person today, orders and customer requests, PO loads, customers, stock, and Sites — what the customer says, receive a load by scan, the unit passport. Clean Cell USA.

1. What it is and where it lives

WHAT	ADDRESS	SIGN IN
Omega Logic app	silmarillion.clearskyomega.com/office/app?org=cleancell.us	work Google account of the workspace
Office (desktop)	silmarillion.clearskyomega.com/omega-logic?org=cleancell.us	same account
Fleet register (the spreadsheet)	silmarillion.clearskyomega.com/logic-register?org=cleancell.us	same account
Try it first (sample data)	silmarillion.clearskyomega.com/app-sandbox/office	any email

The desktop office is the full system. The app puts the daily decisions where the person is, and it reads and writes the same orders, customers and units through the same signed-in endpoints, so an answer given on the phone is on the customer's screen the moment it is saved.

2. Put it on your phone

It is a web app: nothing to download from a store, and every update reaches the phone the next time it is opened. Open the address once from the link the office sends; the app remembers the workspace after that. Sign in with the work Google account that is a member of the workspace.

iPhone or iPad (Safari)

1. Open **Safari** and go to the address above.
2. Sign in.
3. Tap the **Share** button (the square with the arrow, at the bottom of the screen).
4. Scroll the sheet and tap **Add to Home Screen**, then **Add**.
5. Open it from the home screen from now on. It opens full screen as **Omega Logic**, ClearSky's app, with your company's workspace shown inside once you sign in.

Android (Chrome)

1. Open **Chrome** and go to the address above.
2. Sign in.
3. Tap the Chrome menu (three dots) and choose **Install app** or **Add to Home screen**.
4. Confirm. The app appears with your other apps, with its own icon.

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

3. Pick a hub, or use the five tabs

After you sign in, **Home** asks **Where to?** and shows the hubs, the way QuickBooks lays out its app: Sales & orders, Customer hub, Plant, Deliver & sites, Stock & supply, Money, Setup, Help & guides. Tap one and its list opens. Under the hubs, Home shows what needs a person today.

- **Home:** the hubs; orders to price, awaiting deposit, in build, ready and shipped; **needs a person:** company POs to review, open customer requests, orders that need attention; money; the plant.
- **Orders:** every order with its customer, lines, total and balance, and the work order's built % once it is on the floor. Open one for lines, invoices, build, shipment and the customer's requests. **Answer & close** a request here. When your company bills its own customers, record **invoice issued** and **payment received** on the order.
- **Customers:** every account with its terms and logins; balance, open requests, the terms to edit, the portal link to send them.
- **Sites:** mirrors *Deliver* → *Sites & custody* on the desktop. **The customer says:** each unit the customer placed at a site, with **Confirm**. **Going to:** destinations named before arrival. **Receive a load:** choose the load, scan or type each serial. **Unit passport:** custody, who confirmed, warranty and SLA, history, and only the moves that apply.
- **Menu:** every function in one place, with a search box and the ones you use most as circles along the top. **PO loads** (paste a stack of customer POs: PO number, SKU, qty, ship-to name, address, city, state, ZIP, requested date, notes), **Stock**, the Fleet register, the plant app and every desktop page are here, never more than two taps away.

What stays on the desktop, on purpose. Approving a customer price, accepting an order, recording a shipment and settling wires happen on the desktop office pages, next to the QuickBooks evidence. So do the spreadsheet import of site assignments and the coverage templates. The app shows every one of those results and never invents a number.

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

4. How it links to the main system

1. A customer sends a stack of POs from their app, or the office keys them in under Menu → PO loads. Each is an order awaiting pricing, on Home and on the desktop Company POs page.
2. The office prices and accepts on the desktop; the deposit is invoiced through QuickBooks; when it is paid the order is released to the plant.
3. The builders build it bench by bench. The Stock tab shows finished units and what is short; a finished unit built for stock is assigned to the order here.
4. The office records the shipment on the desktop (Shipping & receiving). Every serial on the load starts its custody chain: in transit.
5. The customer says on their phone where each unit is going and when it arrived; they assign it to the site it is interconnected at. The **Sites** tab shows what they said, and the office confirms it. The warranty runs from the ship date and is tied to that site.
6. The **Fleet register** on the desktop is the whole thing as one spreadsheet: seller, buyer, reseller, end customer, site, load, carrier, BOL, every date, warranty and SLA — edited in place, exported to CSV.

Unit passport on the phone:
custody, coverage, the moves that apply

5. If something looks wrong

- **"Open the app once from your office link so it knows your workspace"**: open the address with ?org=cleancell.us once; the app remembers it.
- **The app looks stale**: close it fully and open it again. Updates arrive on the next open; data is never shown from a cache.
- **Offline**: the app says so and shows nothing rather than yesterday's list.
- **Questions**: ClearSky Energy Solutions. The full manual is in the workspace documentation.
- **Nothing loads after sign-in**: your email is not a member of the workspace yet. Contact ClearSky or your administrator.
- **A move is refused** (for example commissioning a unit that has not been received): the message says why. The rules are the same on every screen; record the earlier step first.

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

The Plant app

Omega Logic on the builder's phone: work orders, every unit and its step, the bench scanner, stock, quality holds. Clean Cell USA.

1. What it is and where it lives

WHAT	ADDRESS	SIGN IN
Plant app	silmarillion.clearskyomega.com/plant/app?org=cleancell.us	work Google account of the workspace
Bench scan station	silmarillion.clearskyomega.com/plant/station.html	a station credential from Work orders, pasted once
Try it first (sample data)	silmarillion.clearskyomega.com/app-sandbox/plant · /app-sandbox/bench	any email

Nothing lives only on the phone. The app reads and writes the same work orders and unit records as the plant board and the office, through the same signed-in endpoints, so a scan at a bench is on every other screen the moment it is saved.

2. Put it on your phone

It is a web app: nothing to download from a store, and every update reaches the phone the next time it is opened. Open the address once from the link the office sends; the app remembers the workspace after that. Sign in with the work Google account that is a member of the workspace.

iPhone or iPad (Safari)

1. Open **Safari** and go to the address above.
2. Sign in.
3. Tap the **Share** button (the square with the arrow, at the bottom of the screen).
4. Scroll the sheet and tap **Add to Home Screen**, then **Add**.
5. Open it from the home screen from now on. It opens full screen as **Omega Logic**, ClearSky's app, with your company's workspace shown inside once you sign in.

Android (Chrome)

1. Open **Chrome** and go to the address above.
2. Sign in.
3. Tap the Chrome menu (three dots) and choose **Install app** or **Add to Home screen**.
4. Confirm. The app appears with your other apps, with its own icon.

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

3. The five tabs

- **Today:** open work orders, late, with holds, mine; today's scans, units that reached Ready, refusals, test fails; **needs a person** (held, stuck, failed, quiet benches, tap to open); **Scan at a bench.**
- **Work:** every open work order, late first, with All / Mine / Late / Holds / Ready filters. Tap one: stage, target, built %, ready units, holds, next operation, what it is **short of**, every unit with its station and step progress.
- **Scan:** opens the bench screen. Paired once as a **roaming phone**, the builder picks the bench they are at on each scan. Look up any serial from here.
- **Stock:** finished units by product (available, assigned, building) and the parts short for the open work.
- **Quality:** units on hold. Open one to place a hold with the reason, or release it with the disposition. A hold stops every scan on that unit until it is released. Once a unit has shipped, its record shows **After the plant:** where it is now, which site it went to, and a link to its custody passport.

The bench

Scan the unit's serial or its label. The screen shows the steps for this bench with each part and quantity for this unit. Scan a part's label, or tap **Issue**, to take it off stock and onto the unit; a lot number travels with it. A check step gets **Done**. When every step is complete the bench says which bench is next; the next bench refuses the unit while anything here is open. Scans queue when the yard has no signal and send when it returns.

The bench: this unit's steps and parts, issued on scan

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

4. How it links to the main system

1. The office accepts an order on the desktop; when the deposit is paid it is released and a **work order** exists. It appears on the Plant app's Today and Work tabs.
2. Serials are registered on the desktop plant board. The builders build bench by bench with the scanner, issuing parts as they go. The materials plan nets what was issued; Stock in the Omega Logic app shows what is short.
3. A unit that reaches **Ready** is finished stock. The office assigns it to an order from the Omega Logic app, or the plant built it for one already.
4. The office records the shipment on the desktop. From then on the unit's custody chain starts: in transit, received, assigned to the customer's site, commissioned. The Plant app shows that under **After the plant** on the unit, and the customer sees it on their phone.
5. Every unit's full record — the plant trace, the tests, the scans, the custody chain and the warranty — is one passport on the desktop: silmarillion.clearskyomega.com/logic-custody?org=cleancell.us.

Your apps. Today in the Plant app links to the Omega Logic app and the bench. One account, one record: what you build here is what the office ships and the customer places at a site.

5. If something looks wrong

- **"Open the app once from your office link so it knows your workspace"**: open the address with `?org=cleancell.us` once; the app remembers it.
- **The app looks stale**: close it fully and open it again. Updates arrive on the next open; data is never shown from a cache.
- **Offline**: the app says so and shows nothing rather than yesterday's list.
- **Questions**: ClearSky Energy Solutions. The full manual is in the workspace documentation.
- **Nothing loads after sign-in**: your email is not a member of the workspace yet. Contact ClearSky or your administrator.
- **The bench says it is not paired**: a plant administrator creates a Roaming phone credential under Work orders on the desktop; paste the token once on the bench screen.

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

Your account on your phone

Site plans in Editor Lite, your orders with their milestone and warranty, purchase orders, and Sites & equipment: where each unit is going, when it arrived, which site it runs at. From Clean Cell USA, on the ClearSky OMEGA platform.

1. What it is and where it lives

WHAT	ADDRESS	SIGN IN
Customer app	silmarillion.clearskyomega.com/portals/customer/app?org=cleancell.us	your email (a login link is emailed to you) or Google
Customer portal (desktop)	silmarillion.clearskyomega.com/portals/customer/?org=cleancell.us	same login
Try it first (sample data)	silmarillion.clearskyomega.com/app-sandbox/customer	any email; ops@riverside.example has the history

The app and the desktop portal are the same account. What you do on the phone — a purchase order, a question on an order, where a battery is going — is what your supplier sees in their office the moment it is saved.

2. Put it on your phone

It is a web app: nothing to download from a store, and every update reaches the phone the next time it is opened. Open the address once from the link the office sends; the app remembers the workspace after that. Tap **Email my login link**, open the email and tap the link, or sign in with Google. The first sign-in creates your account from the verified email; if your company already has an account, your supplier assigns your email to it.

iPhone or iPad (Safari)

1. Open **Safari** and go to the address above.
2. Sign in.
3. Tap the **Share** button (the square with the arrow, at the bottom of the screen).
4. Scroll the sheet and tap **Add to Home Screen**, then **Add**.
5. Open it from the home screen from now on. It opens full screen, with the company's icon and name.

Android (Chrome)

1. Open **Chrome** and go to the address above.
2. Sign in.
3. Tap the Chrome menu (three dots) and choose **Install app** or **Add to Home screen**.
4. Confirm. The app appears with your other apps, with its own icon.

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

3. The four tabs

- **Design:** Site Map · Editor Lite — a new site plan from an address, a quick size (kW and hours against your supplier's catalog) with **Lay it out** and **Send as a PO**, and every saved plan.
- **Orders:** each order with its milestone (received, confirmed, building, testing, ready, shipped), lines with the warranty date, invoices with the pay link, destinations and loads, and **Request a change or ask a question**.
- **POs:** paste your purchase orders, one line per product per PO, and **Send these purchase orders**. Each is received for pricing; nothing is charged.
- **Account:** your account number, company, rep and terms; your details; and **Sites & equipment**.

Sites & equipment — "this one is going here"

1. **Add a site:** the location where the units will be interconnected — address, utility, meter, point of interconnection. Once.
2. While a unit is **in transit**, choose the site under **Going to**. When it arrives, tap **Received**: it is placed at that site.
3. Or tap **Received** first and then **Assign** it to the site it is installed at.
4. Tap **Commissioned** with the date and who did it.
5. Each unit shows its **warranty** (from, until) and any service level. The warranty is tied to the site. Until your supplier confirms your placement it reads *awaiting your supplier's confirmation*; then *confirmed by your supplier* with the date.

Sites & equipment

Each unit shows where it is and when its warranty runs. Tell us when a unit arrives and which site it is installed at: the warranty is tied to that site.

Design Orders POs Account

A unit received at the site: warranty running, awaiting confirmation

Omega Logic on your phone

The Omega Logic app, the Plant app and the customer app. Install them, run the work, one system. ClearSky-OMEGA

4. How it links to the main system

1. A PO you send from the app lands in your supplier's office as an order to price. You see it under Orders once it is confirmed.
2. Your supplier accepts and invoices on their desktop; the milestone on your order moves as their plant scans your units — nobody types a status.
3. When your units ship, each one appears under **Sites & equipment** with its serial. You say where it is going and when it arrived; you assign it to the site it runs at; you record commissioning.
4. Your supplier sees exactly what you said, on their phone and in their office, and confirms it. From then on the unit's warranty and any service level are on record against that site, and a replacement under RMA carries the remaining term.
5. A question, a delivery change or a warranty claim goes in under the order (**Request a change or ask a question**); the answer comes back on the same order.

One account, one record. The app, the desktop portal and your supplier's office all read the same record. Nothing is stored only on the phone.

The screenshot shows the 'Clean Cell' app interface. At the top, it says 'demo@cleancell.us' and has a 'Sign out' button. The main section is titled 'Orders'. Below this, it shows 'CC-26-4419' with a date '2026-09-01' and 'your PO RCC-2200'. A progress bar indicates the order status: Received (green), Confirmed (green), Building (yellow), Testing (grey), Ready (grey), and Shipped (grey). Below the progress bar, it lists '215 kWh outdoor cabinet' with a quantity of '5'. A summary box shows 'Order total \$501,250.00' and 'Deposit 30%'. Below this, it shows 'deposit invoice \$150,375.00 · paid' and 'balance invoice \$350,875.00 · open'. At the bottom, it says 'Ship to Riverside yard · Bakersfield, CA · 5 x CC-C215'. A section titled 'Delivery address or date' shows '2026-09-20 · waiting for an answer' and 'Deliver to the Bakersfield yard instead' with a new address: '1200 Depot Rd, Bakersfield, CA, 93307'. At the very bottom, there are icons for 'Design', 'Orders', 'POs', and 'Account'. A footer note says 'Orders: the milestone track, invoices, a place to ask'.

5. If something looks wrong

- **"Open the app once from your office link so it knows your workspace"**: open the address with ?org=cleancell.us once; the app remembers it.
- **The app looks stale**: close it fully and open it again. Updates arrive on the next open; data is never shown from a cache.
- **Offline**: the app says so and shows nothing rather than yesterday's list.
- **Questions**: ClearSky Energy Solutions. The full manual is in the workspace documentation.
- **"Open your customer account first"**: tap Account once; the record is created from your verified email.
- **A serial is "not on one of your orders"**: the unit was shipped on an order under a different email or company. Ask your supplier to assign your email to the company account.
- **Editor Lite on a phone**: it opens in the browser at desktop width; it lays out best on a tablet or a desktop.
